

Deliberately different!

Schaeffer AG is what is commonly known as an innovative company. As a small family-run business, it has continually grown to become the absolute specialist in the production of customized front panels and enclosures. The idea behind giving customers powerful and free software with which they can create front panels easily is unique. Over the years we have acquired such a great deal of knowledge in the field of front panel production that we are now also able to offer additional services.

In order to constantly develop our software to adapt to ever-changing customers' demands, we have our own in-house team of software developers. Continual improvements are also being made to the manufacturing processes to ensure that we are able to continue to offer front panels at an unbeatable price-performance ratio in the future.

We are frequently breaking new ground and experiment with many of the developments ourselves. Ill-fitting standard solutions do not satisfy us. This is also reflected in the software we use. In order to map our very special business perfectly, we use the ERP software package ADempiere, which we ourselves helped to design. But this is not the only place we rely on open source. We try to remain as independent as possible from major manufacturers, instead preferring to develop our own projects within a Community.

Our workforce boasts a wide variety of people: You will find all types, from the long-haired software developer with an AC/DC shirt to the young industrial engineer. The highest priority for all of our employees is always to satisfy our customers' demands.

Facts and Figures

- Founded in 1961
