

Holes with Threads & Countersinking

A multitude of thru-holes and similar elements can be positioned on a front panel using the Front Panel Designer. By clicking on the dialog boxes or objects you can enlarge the representation of the property dialog box and have a detailed view of the possibilities available for the objects.

Lettering by Engraving

In addition to objects for the processing of the front panels there are a number of objects available for lettering and decoration by engraving. Beside simple texts complex objects, such as e.g. your logo, can be imported using HPGL Import and positioned on a front panel.

What Else

There is a multitude of additional functions included in the Front Panel Designer so that designing a front panel really does become child's play. You can see a small selection here. Through clicking on a dialog box the illustration is enlarged including a description of the function.

UV printing

Insert graphic files (PDF, JPG, PNG, BMP, TIFF) and print your front panel with customizable designs.

Starting with version 6.0, the Front Panel Designer includes a 3D preview. This way you can view your front panel from all sides and discover any design errors immediately.

Prices

You can check the price for the manufacture of your front panel at any time during the design process. Yes, this is really the price for a single unit.
