

Anodized Aluminum

Anodized aluminum is the most commonly used material for front panels and enclosure parts.

Product characteristics:

- hardened surface
- matt and scratch-free front*
- bright (silver-colored) milled edges

We offer the following designs:

- red anodized
- blue anodized
- gold anodized
- green anodized
- brown anodized
- black anodized
- natural anodized
- natural anodized, conductive passivated reverse side
- Brushed anodized aluminum
- Brushed black anodized aluminum
- Brushed natural anodized, conductive passivated reverse side

We will also be glad to send you samples if required.

Material specifications

The material for our aluminum in all samples is EN AW 5005 H24/34 [Al Mg1(B)] and ROHS-compliant. We will also be glad to send you samples if required.

*Production factors may cause the reverse side to display processing traces such as milling marks, scratches, or a thinner anodized layer.
