DECLARATION OF CONFORMITY

REACH Regulation (EC) No. 1907/2006
SVHC Candidate List as of 4 February 2026
RoHS Directive (2011/65/EU)

As a supplier of aluminum and plastic products, we certify that we are compliant with the REACH regulations regarding the production of products that could potentially contain restricted materials. According to the material information provided by our suppliers, the materials we use either do not contain any substances from the SVHC candidate list (ECHA controlled substances), or if substances are present they are within the maximum permissible limit in accordance with REACH regulation.

If the material does not conform to these regulations, our suppliers are obligated to inform us immediately. Once we determine that our products are non-compliant, in accordance with Article 33, we will inform our customers without delay or request needed.

According to our current information, our products comply with the aforementioned guidelines and are produced in accordance with all applicable requirements.

We are following the latest developments of the legal requirements and any discussions that may change the current standing of substances that we are monitoring. Our goal is to track substances of concern, as well as identifying new ones early enough to make sure they are not an issue for our materials. Identifying candidate substances in our products, maintaining quality controls, following appropriate experts, and engaging in an intensive dialogue with our suppliers are all integral components in our quality system.

By keeping these standards at the forefront, we not only ensure that our products comply with legal regulations but also that we are taking steps to ensure they are environmentally-friendly and sustainable for the future.
