

Other materials

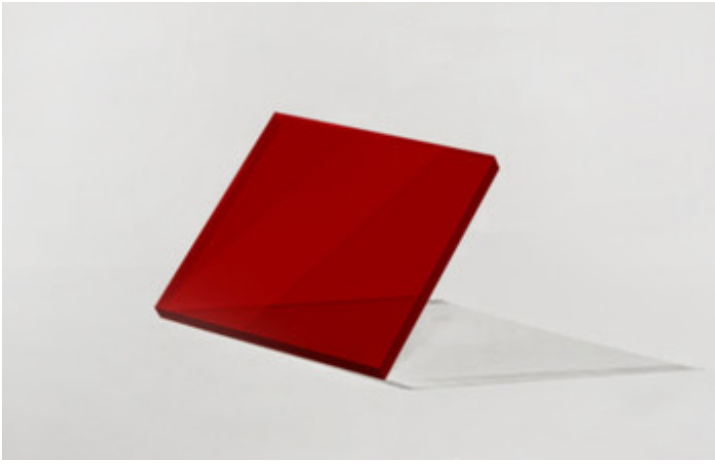

Raw Aluminum

Raw aluminum is unfinished and thereby cheaper than anodized material. It is used for front panels and enclosures, when an immaculate front is not the main priority.

Front panels manufactured from this material have the following properties:

- unhardened surface
 - front not guaranteed scratch-free
-

Perspex Red

Red acrylic glass is semi-transparent and suitable for LED displays. We offer this material in a thickness of 3 mm.

Perspex Clear

Transparent acrylic glass (Plexiglas®) is mainly used for the production of displays. Available thicknesses: 2 mm/ 3 mm/ 4 mm

We process the following plastics and non-ferrous metals on request:

Plastics

- Polyoxymethylene (POM)
- Bakelite
- PTFE (Teflon®)
- PVC
- Laminated paper (Pertinax)
- Epoxy resin
- Engraving materials

Non-ferrous Metals

- Brass
- Copper
- Bronze

You will find notes on processing these materials in our [online help](#).
